Features:

1.Integrated CH340E and CH9329 chips, efficient and stable.

2.Supports USB to serial port and HiD, with comprehensive functions.

3.No need for complex protocols, simplifying the difficulty of user development.

4.Compatible with full functions of keyboard and mouse, flexible application.

5.Compact size design, easy to integrate and use.

1.Equipped with CH340E and CH9329 chips

2.Comes with USB 2.0 to serial port+serial port to standard HiD conversion

3.Supports all functions of USB keyboard and USB mouse

4.USB-5V power supply

5.USB 2.0/HID transmission

6.Board size: 22.8* 15mm (excluding interfaces)); Total length (including interfaces):37mm* 15mm

Package Include:

1X module

1X needle arrangement

No complex protocols required

No complex protocols required, simplifying the development process for users

Mouse Device Module

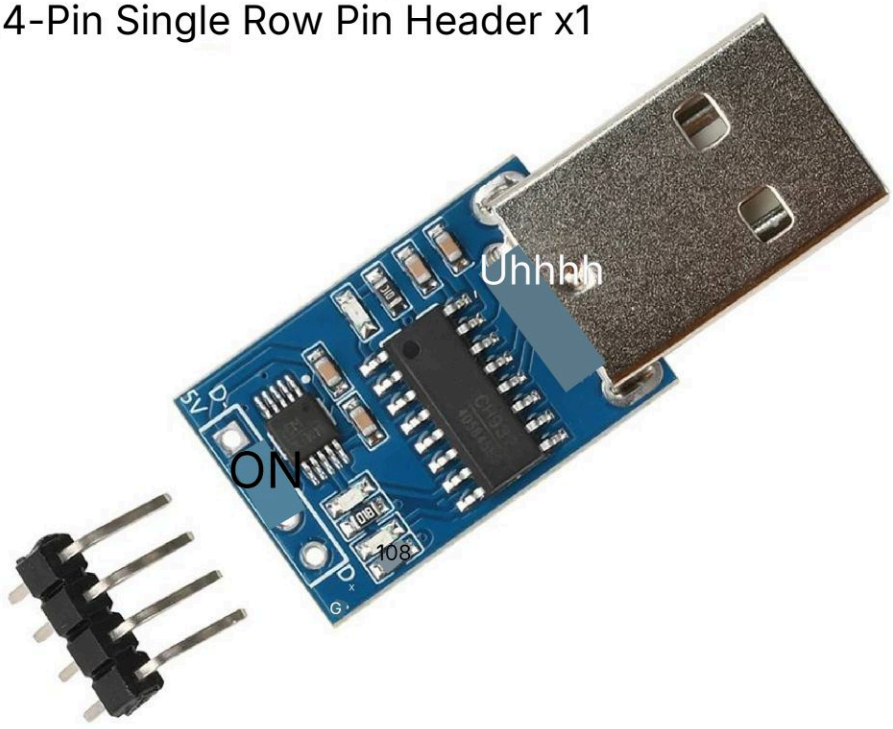

Compatible with full keyboard and mouse functionality, offering flexible application

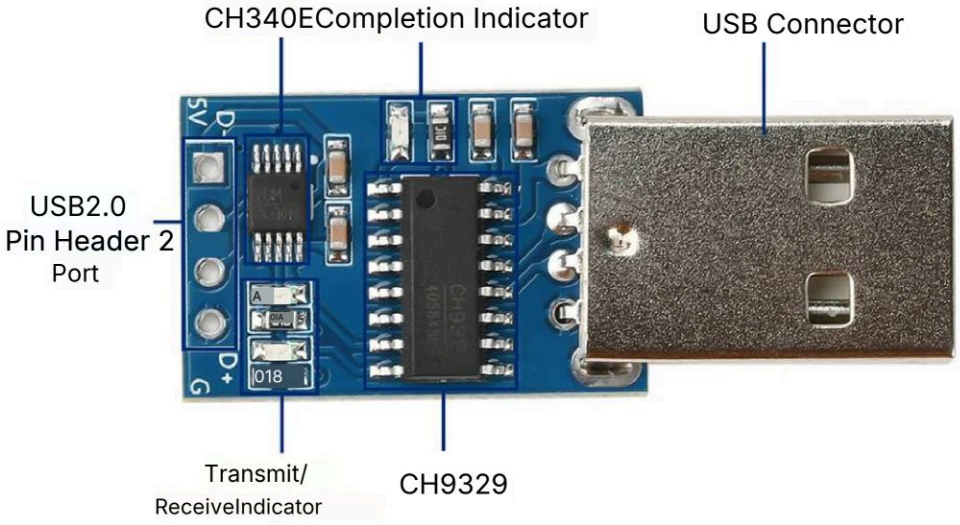

1.CH9329 USB Module 2.Oto Standard

USB-HID Keyboard/Mouse Device Module x1

2.4-Pin Single Row Pin Header x1

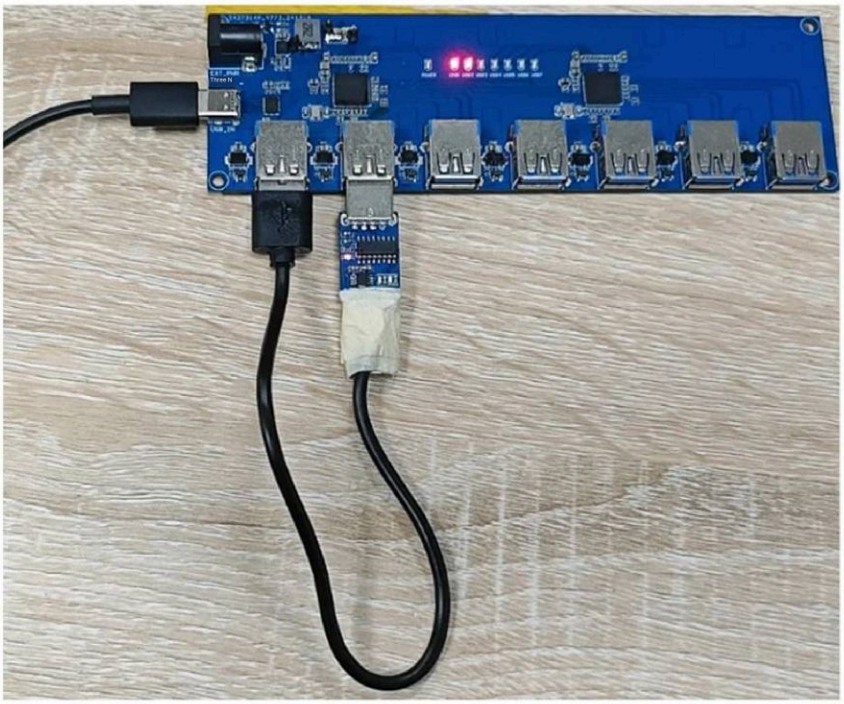

Interface Overview

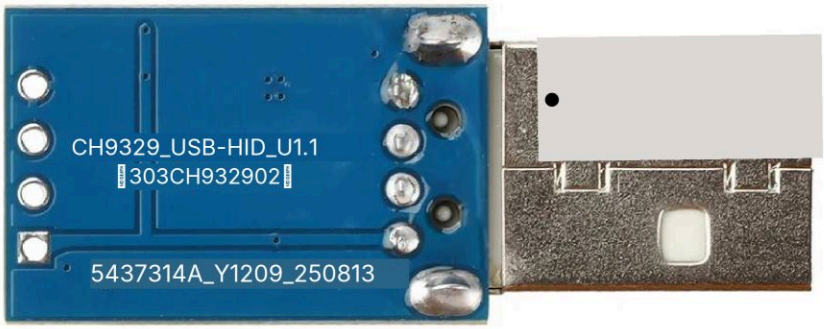

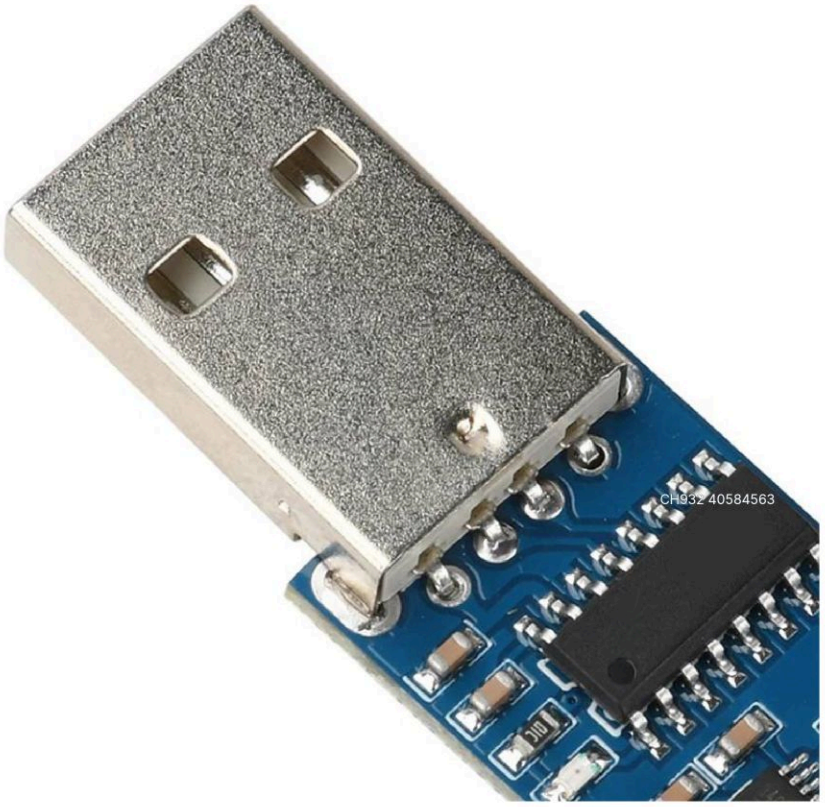

Module Testing Procedure

Insert the module's USB connector into the device requiring control.Connect the USB 2.0 port at the opposite end (in sequence: 5V_DN-DP-GND)to a USB data cable and plug this into a computer (the same device maybe used).
